How to integrate the extensions newslettersubscription and newsletteraddon @author Luiza Dri Bagesteiro

1. Include the extensios in config/localextensions.xml

```
<extension name="newslettersubscription" />
<extension name="newsletteraddon" />
```

2. To make the AddOn available for the *storefront extension you have to specify the dependency in *storefront and Eclipse workspace

```
<requires-extension name="newsletteraddon"/>
```

- 3. Run ant all
- 4. Run hybris server
- 5. Do a system update

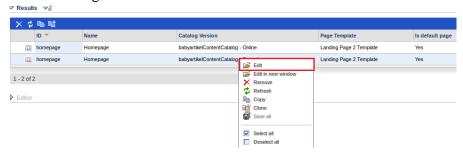

V	Update running system
	Clear the hMC configuration from the database
	Create essential data
V	Localize types

Adding NewsletterSubscriptionForm and NewsletterSubscriptionManagement components:

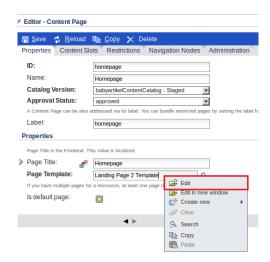

- 1. In the hMC, expand the WCMS menu and click on Pages.
- 2. Search for the page that you would like to add the component. (In this example, we are adding the Newsletter Form on the Homepage)

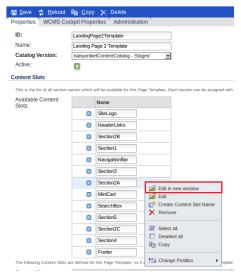

3. Right click on the staged version and Edit.

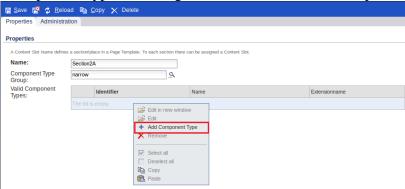

4. In the Content Page editor, edit the Page Template property.

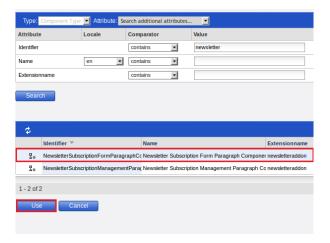

5. In the Page Template editor, right-click in the content slot (example: Section2A) and select Edit in new window.

6. In the Valid Component Types table, right-click and select Add Component Type.

7. Search for and select the component. (example: NewsletterSubscriptionFormParagraphComponent)

8. The Valid Component Types table should look like this:

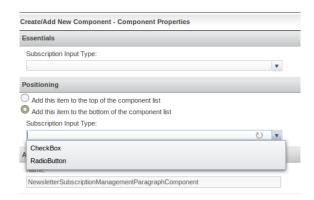

- 9. Click Save and Close in the top bar of the pop-out window.
- 10. To add the other component, repeat all steps.

Using the new component:

- 11. Login to the cmscockpit.
- 12. In the left navigation menu, select the website and Content Catalog / Staged.
- 13. In the browser area, double-click on the Homepage to activate it. (Note that we added the Newsletter Form on the Homepage in step 2)
- 14. In Section2A Slot for Homepage, click on Create an item. (The chosen slot for the component in step 5)

- 15. Select the component as the type and Create a new item.
- 16. If your component is NewsletterSubscriptionManagementParagraphComponent, you must choose one of the subscription input types, checkbox or radiobutton.

- 17. Enter a name for your new component and click on Done.
- 18. Right-click on the Content Catalog / Staged option in the left navigation menu and click on Synchronize content catalog.

Specify labels for the input type of NewsletterSubscriptionManagementParagraphComponent:

- 1. In the hMC, expand the WCMS menu and click on Components.
- 2. In the Search area, click on the Type: dropdown and select Newsletter Subscription Management Paragraph Component
- 3. The component will appear twice (in the Staging and Online catalogs). Select the component in the Online catalog and go to the Administration tab. Specify the text that will appear for the checkbox/radiobutton.

4. Note that the radiobutton requires two labels. Example:

5. Save the component, and navigate to (or refresh) the homepage.
